Grothendieck  
sees everything globally from the beginning Hironaka  
said *no coordinates no*  
*equations*

roller coasters have no sudden on  
a dime  
change of direction however steep  
no cusp  
no crossing through themselves—  
*their shadows do : sharp projections of the smooth*

pulling back  
to the smooth  
from tangle local  
problem disappears : only *global* lift  
left

inside the crush cross point so multifarious—a many nenny  
whorled  
blow it up ( gentle difficult  
*balloon work* ) make it  
smooth

yes Jane it is regrettable that the mathematical  
 with so much to offer  
 by way of reframing should be in thrall  
 to such a degree to the defense & security retrenchment  
 agenda complete with strong support  
 for money-changers  
 the field's heavy lifting toward promotion of some singular  
 global threat (say terrorism) or space  
 settlement (after  
 the bombing stops) an Archimedean  
 precedent

## To Gödel

and to his *Abundance* Theorem

particular thanks for showing Rule-governed systems are  
richer than even

can be described or defined, exhaustively at one  
time, so always

nougats to be made that can't  
be toothed—or dis-toothed—*within* the Rule

but that will be stickily true, nonetheless;  
a caution

one would think on attempts to pre-empt  
tasty discussions, especially ones—like ours—self-

enunciations; a caution against  
attempts to represent *entirety*, descending from there

to q.e.d., as if  
one were handling truffles,  
or trifles, in some counter-  
game; as if corruption

and abundance itself weren't, are, *is* the same . . .
